Rendering

PDF Guide

You are going to use the render tool. Rendering allows you to make your drawing into a realistic image.

1. Click the DESIGN TAB.
2. Select RENDER.

Scene Settings

Set the environment and lighting for the scene. This setting only affects the Rendering workspace.

Select Scene Settings. This setting will allow you to choose different lighting and camera angles for your rendered image.

COMMENTS

RENDERING GALLERY

Use the Render tool  to save renderings to your gallery.

- 1- Brightness- Brightness will brighten your image. We would suggest brightness between 1000- 1500lx.
- 2- Position- Position will allow you to choose the position of the camera. It may create a shadow underneath your car.
- 3- Background and Colour- You can choose Solid Colour and choose the colour of your background.

RENDERING GALLERY

Use the Render tool  to save renderings to your gallery.

There are two ways you can render- In Canvas Render and Render.

- 1- In-Canvas Render is local and will render to your resolution of your screen.
- 2- Render is a cloud-based tool which will give you a better rendered image.

- 1- Once you have clicked In-Canvas Render, car will automatically start to render.
- 2- You can change the quality of your render by moving the little arrow to infinite.
- 3- Choosing Infinite, the timing of your rendered image will be longer than choosing excellent. However, the quality of your image will be a lot better.

RENDERING GALLERY

RENDER ON SAVE

Drag and drop Rendering Gallery thumbnail views here to enable rendering on save for future versions

If you want to change the scene settings after you have rendered, you can.

- 1- Go to Scene Settings and change.
- 2- Once you're happy with the settings, you can render your image again.
- 3- You may notice the credits will become more expensive every time you render your image.

Congratulations, you have created a rendered image of your design!
